As to 35 USC 112 issues: claim 20, L. 6 describe the screen to be placed vertically above the support plate; claim 26 may be cancelled.

As to rejections, discussions brought out that '607 is directed to high density flocking of substrates having resilience + subsequent relaxation. Inventors brought up that shoe sole materials upon heating for resilience would shrink/crack on cooling, destroying intent of product. Also noted flocking method of '048 is not cited for high density flocking, and interposed screen would inhibit high density flocking.
